

CS061 – Programming Assignment 01

Objective The purpose of this assignment is to familiarize students with the basics of LC3 assembly language programming, the SIMPL simulator, and rudimentary debugging

Your Tasks Implement the LC3 program from Lab 01. This is the program that used a DO-WHILE loop to multiply two numbers together.

Once you have the program coded and saved to “asn1.asm” (remember to use exactly that name), return to the terminal and load the program into the SIMPL simulator by typing:

```
simpl asn1.asm
```

When the simulator opens, place a breakpoint at the beginning of the DO-WHILE loop by right-mouse-clicking that line of code and selecting “Mark as Breakpoint”.

Lastly, create a table of values for each register for

- Before the loop
- Each iteration of the loop
- At the end of the program’s execution

Record the table as a block of comments beneath your header and above the actual LC3 code.

Feel free to steal the format of the table below. Obviously, replace each “x” in the table with the actual value of the register ☺

Uh...help? **Overview of LC3 Programming (created by past students)**

Beginner’s Guide to Linux/Unix
<http://www.ee.surrey.ac.uk/Teaching/Unix/index.html>

The following program performs the action: $R3 \leftarrow 6 * 12$ (i.e. multiply 6 by 12 and write the result into Register 3) using a DO-WHILE loop:

Rubric

- This assignment will be graded very leniently. You will be informed of any mistakes, but unless you actually leave things out, you probably won't lose any points.
